THREE-PHASE UPS

THREE-PHASE UPS

Conversion UPSs with latest generation 3-level IGBT technology. They supply a rated power of 60-80-100-125-160-200-300-400-500-600 kVA and can be connected in parallel and have N + X redundancy up to a maximum of 6 units.

Keor HPE is the ideal solution for medium and large power critical applications (tertiary, hospital, industry, transport) where continuity of service, high quality power supply and reduced consumption are required.

New aesthetics

The refinement of the design and the careful choice of materials reflect the performance and reliability characteristics of the **Keor HPE** family. The new door with white panel, the new touch screen displays and the hexagonal motif, also reflected in the ventilation grids enrich the product, combining technology and design.

Smart Display

The new **Keor HPE** are equipped with smart, interactive, simple and intuitive displays, thanks to which it is possible to view the operating parameters of the UPS, selecting the preferred language. The displays are supplied in 2 different versions: 7 inch LCD for 60 –160 kW models 10 inch LED for 200 – 600 kW models.

High efficiency and low TCO

Keor HPE is designed to reduce losses and lower management costs. The high yields (certified by external laboratories) guarantee low operating costs. Transformer-free technology and configurations with internal batteries facilitate installation and optimise space in technical rooms.

Greater power density

The 60 and 80 kW models have optimised dimensions in a volume of 0.78 m³.

Power factor

The modern power circuit architecture allows for load supply with maximum active power.

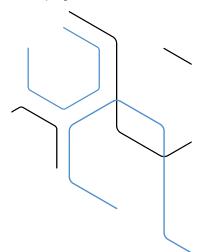

Front internal access

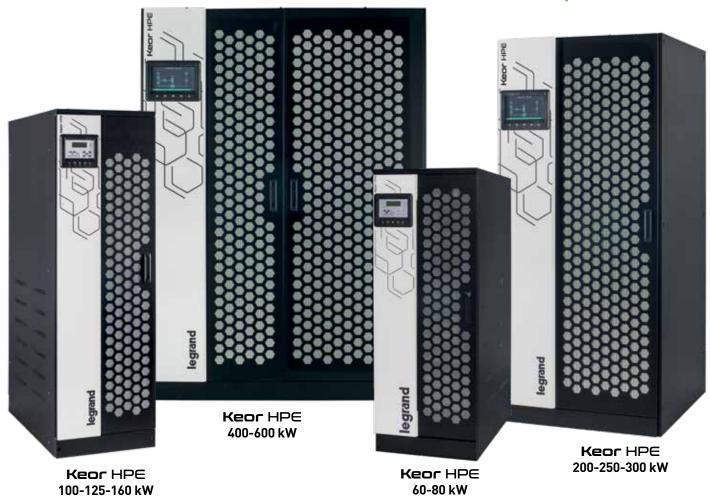

The **Keor HPE** UPS was designed to be installed and maintained from the front. All the protection switches and communication ports are located on the front of the UPS. A practical internal door also allows you to reach the parts installed on the bottom of the UPS, in order to have maximum access to all the components.

The simplicity of access to all parts subject to maintenance, significantly reduces **MTTR**, that is the **average machine repair time**.

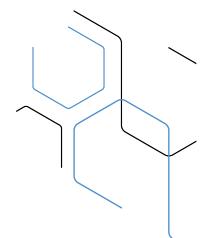

Internal batteries

The 60 and 80 kW versions can contain up to 180 batteries, allowing standard levels of autonomy without relying on external batteries.

NOTE: front internal access is not possible in the 2 60 and 80 kW compact models.

Parallel capacity

Up to 6 units can be connected in parallel, achieving maximum 3 MW power.

Stable and reliable parallel even at high power with many units (more than 3) thanks to dedicated power line balancing systems*.

Redundancy

The possibility of connecting up to 6 UPSs in parallel allows for maximum service continuity and system safety.

Back feed detection

All units have contacts to activate voltage back feed protection.

Insulation transformers

Available for the entire **Keor** HPE family, as optional external accessories.

OPTIMAL BATTERY MANAGEMENT

Keor HPE includes advanced battery charging and management functions, which guarantee the best performance and maximum operating life.

Intermittent charging

with adjustable cycle (27-3 standard), to extend the effective life and obtain maximum energy savings.

Automatic current charging

regulation with load power priority, to quickly charge batteries for long autonomies.

Voltage charge

compensation according to temperature, to avoid excessive charges and overheating.

Temperature probe included in all units.

^{*} For parallel configurations involving 4 or more units, please contact your Service representative for configuration guidance.

Kear HPE 60-80-100-125-160-200-250-300-400-500-600

Conventional UPS - Online three-phase double conversion VFI

Characteristics

- Power from 60 to 600 kVA
- Three-phase UPS
- IGBT rectifier

- High efficiencyDigital signal processor (DSP)High input power factor (PFC) value
- Output power factor 1
- Battery charging, dynamic, intermittent, with temperature compensation
 Low input and output harmonic distortion values (THD)
 Compatibility with Genset

- Parallel capacity up to 6 units
- Communication ports
- Optimised cooling system

Model	UPS						
	Apparent power (kVA)	Active power (kW)	Autonomy (min.)	Dimensions H x W x D (mm)	Net weight (kg)

Reliable

Directly present in more than 70 countries and servicing its products in more than 150 countries worldwide, a team of qualified engineers is available to support your UPS system to ensure power quality and availability to the most critical loads.

Excellent

Legrand's competitive edge lies in its ability to provide high value-added UPS systems and services for both end users and business partners.

For Legrand, creating value means coming up with solutions for lower energy consumption, but also integrating product design into the overall development process. With around 200 000 catalogue items, the Group also provides all products required for electrical and digital building installations, particularly as integrated systems, finding solutions to fit everyone's needs.

Tailor-made

Legrand offers a complete range of specific solutions and services to meet customer requirements:

- Technical pre-sales support at the project design stage
- Factory acceptance test
- Supervision of installation, testing and commissioning, site acceptance test
- Operator training
- Site audit
- Warranty extension
- Annual maintenance contract
- Fast intervention on emergency call

UPS

CUSTOMER SERVICES

SITE INSPECTION, INSTALLATION SUPERVISION.

We perform a comprehensive check of the UPS environment to ensure safety and fault-free operation.

Our technical experts give manufacturer's recommendations to the site engineer or electrical contractors, and supervise the UPS installation before load power-up.

SITE TEST, COMMISSIONING.

Our Service Engineers conduct rigorous site tests and full setting-up of the UPS system before going live. They also perform site acceptance tests according to your requirements. Commissioning operations for all UPS are carried out by qualified engineers to guarantee seamless start-up. After the final handing over of the UPS system, a Test and Commissioning report is delivered to you.

We offer on-site training to ensure your equipment's safe and efficient operation.

Troubleshooting courses are also available in our plants for intensive hands-on practice on UPS training equipment.

PREVENTIVE MAINTENANCE

Electronic equipment and power systems, such as UPS, contain life-limited components and parts that must be replaced according to the manufacturer's specifications.

To ensure optimal performance and to protect your critical application from potential downtime, it is crucial to perform

preventive maintenance operations on a regular basis and replace parts when needed. Our Service Contracts include cleaning, IR thermography, measurements, functional tests, event log and power quality analysis, battery health check, hardware and software upgrades, and technical reports. A Preventive Maintenance Plan is one of the most cost-effective actions that can preserve your initial investment and ensure your business continuity.

CORRECTIVE MAINTENANCE, EMERGENCY CALL

In the event of an Emergency Call, our worldwide service network, with engineers and spare-parts stocks strategically located as close as possible to your site, guarantees a fast intervention time with 24/7/365 assistance.

After connecting his laptop to your UPS, very powerful diagnostic software helps our engineer to identify the fault, thus ensuring short MTTR (Mean Time To Repair).

Corrective actions are performed such as part replacement, adjustments and upgrades to return the UPS system back to normal operation.
